## BENEFIT:

- ❖ Less weight of the pallet which gives easy handling by forklifts.
- ❖ Taking out of boxes from the pallets is easy.

## POINTS TO BE CONSIDERED:

- ❖ The boxes in the pallets can be slide or shifted in any one side during transit. Particularly where the pallets are to be transported in trucks or where pallets handling is more by forklifts, there are more chances of sliding or moving or shifting of boxes in any one side.
- ❖ There is a big gap between pallet to pallet, so there is more space for pallets to shift or slide or move during transit. Airbags are not fully secure to hold, so chances of shift of upper pallets are more in the container during transit. So the goods may damage during transit.
